Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/18/07 has been entered.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

On line 2 of paragraph 1 of p.1 the specification, "2004." was replaced with --
2004, now US Patent Number 7,179,228.--

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach or fairly suggest a device or system for monitoring a user's blood pressure while the user is ambulatory, comprising a microprocessor that comprises computer code that controls the microprocessor to

Art Unit: 3735

analyze the primary and reflective peaks comprised by the time-dependent waveform from the blood pressure monitor with a mathematical model by varying parameters of the model until they correspond to the amplitudes of the primary and reflective peaks and to calculate a blood pressure value from parameters of the model determined from the time-dependent waveform, the derivative of the time-dependent waveform and the primary and reflected peaks in the waveform, or parameters determined by fitting the primary and reflective peaks comprised by the time-dependent waveform generated when the user is at rest, in combination with all of the other limitations of the claims. The prior art of record similarly fails to teach a method for monitoring a user's blood pressure while the user is ambulatory wherein the primary peak and reflective peak are analyzed within the time-dependent waveform with a mathematical model by varying parameters of the model until they correspond to the amplitudes of the primary and reflective peaks and calculating a blood pressure value from parameters from the model determined from the time-dependent waveform generated when the user is at rest, in combination with all of the other limitations of the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patricia C. Mallari whose telephone number is (571)
